

Dear All

The entire La Rosita team wishes you all the best for the new year 2023.

We continue to work tirelessly on the development of all the devices in our La Rosita and ZardoZ ranges.

Following our previous News Letter, your numerous feedbacks and your praising comments, we have decided to equip all our instruments with these "Magic" components which are soft, neutral and even more defined than the previous ones which we considered to be of the highest musicality.

It is interesting to note that while we are touching the maximum of the possible calculation powers of our devices, the possible way of improvement comes from the most "basic" components like resistors and capacitors.

Of course, it is the technological advances and the courage of small manufacturers always in search of the best which allow these advances and we wish, not only, to make benefit from it our current production but also the apparatuses already in operation at your place.

Concerning the resistors, it is a technique using pure solid silver legs capped by crimping sockets without added materials.  
For the capacitors, it is about those known as "chemical" of which we know at which point their sonority is critical varying according to such or such other dielectric but also of the way in which the "internal elements" are fixed.

All this comes from Japan and undergoes a quality control at all stages of manufacture.

We suggest that you come back to us and ask us about the material in your possession (La Rosita and ZardoZ) so that a proposal can be made.

This concerns the whole range of our DAC and Streamer La Rosita but also our amplifiers and integrated tubes ZardoZ and our devices with transistors La Rosita.

On this occasion, each device will be checked and serviced (free of charge).

Kindest regards  
Dan Bellity
